MKU Participates in Kadex 2014

MKU, one of the leading manufacturers of ballistic protection equipment for personnel and platforms, participated again in Kadex this year to showcase its products. MKU has already established a foothold in Kazakhstan with orders from Kazakhstan local police as well as the Ministry of Interior (Kazakhstan). With its state-of-the-art products, MKU can play a definite role in the technological modernisation of the armed forces of the Republic of Kazakhstan. Kadex 2014 provided an opportunity to MKU to showcase its range of products once again in the Commonwealth of Independent States (CIS) region and to form and strengthen ties with its user base. MKU boasts of its experience from personal ballistic protection solutions, to armour solutions for air, sea and land vehicles. "MKU has established a global footprint by providing leading edge quality products to more than 100 countries," proudly announced the company.

The company featured its best products during the show. One of the featured products in the personal protection range is the 'BoltFree helmet' which is based on no-drill concept, that not only provides uniform protection across the shell but also safety from secondary metallic fragments. These helmets are available in both PASGT and ACH configurations. The three-point harness system in the Boltfree helmet provides a snug fit to the soldiers and the spacious air ventilation reduces sweating. These helmets are capable of withstanding high speed FSPs and Handgun ammunitions.

Another unique offering is the G-Factor helmet. ||
